pCon.box 3.16 – New Features

Content

1   Share with Impress

With the new release you will be able to share your project with your customers via our presentation platform impress. Impress is your elegant way to provide a 3D view of your project to your customers PC or mobile device. Customers can even use augmented reality files shared via impress on their mobile device.

Just hit share in the hamburger menu and you will get a link you can copy and share. Alternatively, use the QR code linking to impress.

2 Error Handling

When unknown errors occurred up until now, the application showed a dialog for reporting the error to our support or close the project. This could lead to a loss of your work results.

For the new version, we changed this behavior by adding an option to ignore the error. This makes it possible to save the progress and to continue the work.

2.1 Error Report Dialog

When reporting an error there is now a possibility to add some detail about the error right before opening the mail program. Optionally, you can also add an OBK file to your error report. If you have switched off the automatic error transmission, you do now also have the option to send the error report.

Send report

Please describe the problem in as much detail as possible. What exactly were you trying to do when the problem occurred and what exactly went wrong? Providing us with detailed information will enable us to help you more efficiently. Thank you!

☐ Attach OBK file ⓘ

CANCEL   OK

3   Catalog Search

Manufacturers with special characters can now also be found using normal characters. This method is more robust against errors but can also lead to more search results than expected.

4   Augmented Reality

We have changed the export of augmented reality files to a local version so that non article geometries are now also exported.
