

Release Notes pCon.catalog 2.3.0

New Features:

1. Introduction of the “Catalogs” section in the brand overview for OFML customers, which displays the original folder structure of the OFML data
2. The contact form has been added to each model/material so that users can write an e-mail directly to the manufacturer (only displayed if the manufacturer has saved an e-mail address in the pCon.catalog Editor). The title of the model/material is automatically included to the mail.
3. Linking filters for product families and collections to available options when a brand has been selected

Bugfixes/Changes:

1. Fixed a bug where contact details from PIM were not displayed in the expanded view of models
2. PDFs that are opened in the configurator are now displayed in a separate tab. Previously made changes to the configuration are now saved.
3. Fixed a bug where the title of a model/material was not changed when the language of the user interface was switched
4. Fixed a bug where the “Go back” button was displayed inconsistently on the mobile version
5. Fixed a bug where filter options of categories were invisible
6. Fixed a bug where words written in brackets did not appear in the search results in Brands
7. When sending a message via the contact form to the manufacturer, the title of the model/material is automatically included
8. Display the pcon.catalog logo as a preview when sharing a link from the catalog
