## 1 Mass import of preview images for existing items

In the latest version of the pCon.catalog Editor, we are introducing a new mass operation that allows you to import preview images at the same time. For models, you can now create and insert preview images from the available CAD files. Furthermore, it will be possible to import preview images from your desktop for several existing models and materials.

## 2 Creating a customized catalog structure

With the latest release, we are giving our users the option to create an individual catalog structure with different folder levels. To do this, the new “Catalogs” area has been introduced for all manufacturers in pCon.catalog Editor. This feature can be used to create individual folders and assign the available models and materials. The catalog structure is then displayed within a brand in pCon.catalog.
