# 1 New Features

## 1.1 URL parameter for PIM image slider

The optional URL parameter `pim=true|false` allows you to override your global instance default setting for the PIM slider below the 3D view.

## 1.2 Transparent background for 3D view

The background color for the 3D view now supports complete transparency in addition to white, black, and radial gradient. You can setup this as default for your instance or override your global instance value with url parameter `sb=transparent`. To see an effect, you need a custom color scheme with a color value for the background that is not white or black.

## 1.3 Custom colors for the gradient background of the 3D view

The custom color scheme now supports individual values for the radial gradient of the 3D view area.

```
{
  ,
}
```

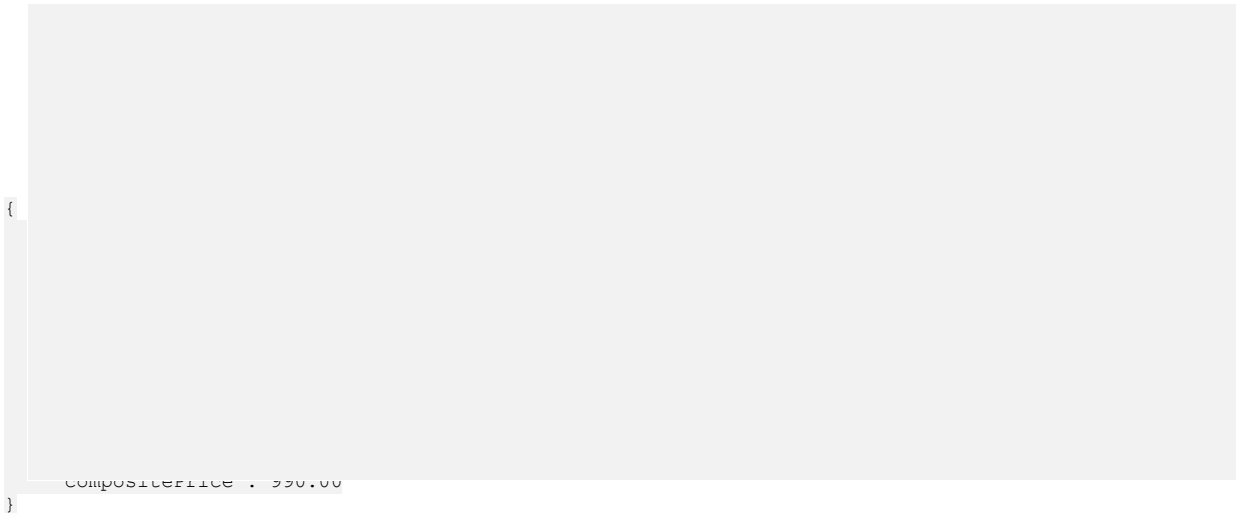

## 1.4 New user tracking event for cart button click (OCI process triggered)

With active user tracking you'll receive a `postMessage` at the moment a user clicks on the "add to cart" button. In case of complex products and a delay until the OCI has been sent, you can show a progress animation for example. New event type is `sendOCI-pre-inform`

```
{
  "type": "sendOCI-pre-inform",
  "manufacturerId": "AB",
  "seriesId": "S1",
  "baseArticleNumber": "123",
  "variantCode": "",
  "ofmlVariantCode": ""
}
```

## 1.5 Support for decimal numbers for discounts in the pricing service

The discount value of a price service supports now decimal numbers. The value will be output now as it is in the response. If you want it rounded, you have to take care that the JSON response contains it rounded.

The shown example response leads to this:

UVP ~~EUR 1,234.56~~ **-19.80%**  
Total: EUR 990.00  
incl. VAT

## 2 Bugfixes / Changes / Miscellaneous

- Header in catalog view follows individual definition of color scheme
- URL of a custom color scheme works even if it isn't a link with file extension .json
- Fullscreen mode starts immediately without showing unnecessary HTML containers
- Cart button is deactivated if no price is available or if the price is 0 EUR
- OCI generation approx. 700% faster
